

Table A - IR2: Information Requests Derived from the Canadian Malartic Corporation's Responses to Information Request #1 (IR1) on the Final Environmental Impact Statement /Environmental Assessment Report for the Federal Environmental Assessment of the Hammond Reef Gold Mine Project

| Reference # | Link to IR1 | Ecosystem Topic | Reference to EIS Guidelines | Reference to EIS | Summary of Comment/ Rationale | Information Request Response to Information Request |
|-------------|-------------|---------------------|-----------------------------|------------------|---|---|
| T(2)-06 | T-1 | Project Description | 5.3 | EIS Appendix1.IV | No map of existing aggregate sources is presented to inform the assessment of effects, including cumulative environmental effects, due to the prospective aggregate pits. The rationale provided is that the proponent will follow the <i>Aggregate Resources Act</i> and the pits are not identified to limit the potential for speculative bidding for resources. This is not sufficient justification to omit the information. | Describe the potential environmental effects (i.e. changes in air quality) from handling the aggregate. Include maps that depict the locations and sizes of the existing aggregate sources and all known and possible sensitive receptor locations. <u>Response:</u> Aggregate will be sourced from an independent off site location. |
